Food Waste Tracking Software Introduced for Restaurants & Foodservice Operations of All Sizes

LeanPath, Inc. Announces Software Solution for Daily Tracking of Food Waste

What: LeanPath® proudly announces LeanPath® WasteLOGGER, a food waste tracking software solution that helps any restaurant, hotel, caterer, or foodservice operations prevent, minimize and avoid pre-consumer food waste (overproduction, spoilage, expiration, trim waste) -- without investing in specialized tracking equipment.

WasteLOGGER will be announced and previewed at the 2010 NRA Show and available in July 2010.

Why: Why track food waste? It's a green best practice that helps operators control costs and reclaim resources from the garbage.

“The EPA’s food waste management hierarchy prioritizes source reduction as the critical first step and best practice in food waste management” says Andrew Shakman, President and Co-Founder of LeanPath, Inc. “And the key to source reduction is daily food waste tracking – without daily information you have no way to diagnose food waste, create awareness, or begin to measure progress.”

Green recognition and certification programs (including the NRA’s Greener Restaurants Program and Green Seal’s GS-46 Standard for Green Restaurant and Foodservice Operations) both identify food waste auditing and tracking as a core best practice in any waste management effort.

Food waste is one of the most expensive hidden costs in any restaurant and foodservice operation. Food waste tracking is the simple, easy, and effective antidote. By tracking waste daily, operators can save 2-4%+ on food purchases, while also saving on disposal and labor costs and operating greener facilities.

How: LeanPath’s Family of Food Waste Tracking Solutions.

Founded in 2004, LeanPath pioneered food waste tracking and offers several product solutions. Together, LeanPath WasteLOGGER and the (CONTINUED)

ValuWaste System allow restaurants and foodservice operations of all sizes to select the right tools to meet their tracking and auditing needs for food waste.

For Volume foodservice & hospitality: The patented ValuWaste® Automated System, a rugged touch-screen terminal and bench scale used to track food waste 24-7 in volume foodservice operations.

WasteLOGGER

For Restaurants & foodservice with lower volumes of food waste: LeanPath WasteLOGGER, a PC-based software tool to track food waste in small to medium-sized restaurant and foodservice operations as well as mobile catering operations, without the need for specialized tracking equipment.

Where: National Restaurant Association Show
Conserve Solutions Center
McCormick Place, Chicago IL
